WORK EXPERIENCE

Meta, Machine Learning Engineer 2025 – Present

- Improved ads CTR prediction by experimenting and tuning offline PyTorch ranking models (feature ablations, calibration, and architecture changes) over ~8B daily impressions
- Designed scalable feature engineering and data analysis workflows in SQL to generate product-level signals for training and scoring datasets utilized across a suite of 10+ ads ranking models
- Shipped performance-critical C++ serving infrastructure, custom cache and feature fetching, for real-time ad ranking; improved p99 latency and throughput for user/product feature retrieval to support high-QPS ranking systems

Advent International, Data Scientist 2022 – 2025

- Modeled market share and cross-brand affiliation using SQL and Python scripts on \$500k+ of alternative datasets such as consumer transactions, web traffic usage, and app usage
- Maintained a suite of robust automation scripts, SQL schemas, and ETL pipelines utilized by the full team of 15 colleagues
- Forecasted whitespace of fast-food chain in a \$9 billion deal, saving \$1+ million in external consulting fees
- Utilized vector databases and LLM models to analyze 10mm+ customer reviews from Google Maps, Amazon, Yelp, Glassdoor, and other miscellaneous ecommerce sites

Boston Consulting Group, Data Scientist 2021 – 2022

- Trained and deployed a recommender system for 3+ million customers leveraging Databricks and MLflow
- Orchestrated an Airflow pipeline to automate data ingestion and AB tests on a daily and weekly granularity
- Provided mentorship to 2 junior level analysts via Python trainings and other contributing guidelines

INTERNSHIP EXPERIENCE

Salesforce, Data Science Intern 2020

- Deployed PyTorch CNN on AWS with active learning to enrich 1 million customer catalog images

NVIDIA, Data Science Intern 2019

- Benchmarked the speed of open-source RAPIDS suite on server GPUs, including cudf and cudgraph

NVIDIA, Software Engineer Intern 2018

- Implemented a C++ system-level Watchdog deployed to 50 IoT devices using Docker and NVIDIA DeepStream SDK

EDUCATION

M.S. The University of Texas at Austin, Computer Science, Overall GPA: 3.8/4.0 2019 – 2021

B.S. The University of Texas at Austin, Computer Science, Overall GPA: 3.9/4.0 2015 – 2019

RESEARCH EXPERIENCE

DICE Graduate Research Assistant 2019 – 2021

RAPID Undergraduate Research Assistant 2018 – 2019

PUBLICATIONS

The Importance of Baseline Models in Sepsis Prediction, MLHC 2020 2020

- Explored the MIMIC III open-source database and verified the open-source code provided by publishers
- Trained baseline regression models competitive with published LSTM neural networks used for sepsis prediction

Auto-Suggestive Real-Time Classification of Driller Memos, IADC/SPE 2020 2020

- Generated NLP models to classify drilling memos from 150 wells into 100 specified activities

SKILLS

Programming Languages: Python, SQL, C++, Rust, Bash

Python Tools: Pandas, Airflow, Selenium, PySpark, OpenAI API, PyTorch, OpenCV, Detectron2, Pytest

Development Tools: Git, Github workflows, Jenkins, VSCode, Vim, S3, GCP, Databricks, Docker, AWS, Snowflake
